Department of Administrative Services

MARCS Tower Co-Location

The Ohio Multi-Agency Radio Communication System (MARCS) Program Office manages numerous tower sites statewide that provide radio coverage throughout the state that are first and foremost a provider of communications for Ohio first responders. However, by nature of the locations of the towers and their height, many entities are potential users of any excess capacity available on these towers. Examples of such entities include other public safety/public service agencies, private cellular, broadband, or other wireless providers, and/or private enterprises with wireless radio needs.

To this end, MARCS has policies in place for those parties seeking the ability to co-locate on one of the currently existing MARCS towers. The policies, process, specifications, responsibilities, etc. are below along with a link to the co-location application form. Please note, the MARCS towers are Class III structures, and therefore may have more requirements and restrictions than other classes of towers.

- MARCS-01 Policy: Use of MARCS Communication Towers, Shelters, and Grounds
- MARCS Tower Site Co-Location Application

The application process requires a structural analysis of the tower (utilizing a Class III rating) with an engineer stamped letter indicating the tower shall hold the current loads, MARCS- design future loads, and the additional requested loads, unless otherwise specified. The cost and time for these studies varies, depending on how recently a structural analysis was done (which you may be able to make some use of), amongst other considerations. A typical timeline is anywhere from 5-8 weeks, with a cost ranging between \$2,500 to \$8,000, although actual timelines and costs may vary.

If you have any questions regarding the process or anything else regarding co-location on a MARCS tower,
